Electric Clothes Dryer 4 Ft 3 Wire Extension Cord NEMA 10-30P X 10-30R [20150831]

Manufacturer: Clean Storm

Electric Clothes Dryer 4 Ft 3 Wire Extension Cord NEMA 10-30P X 10-30R

Temporary power distribution box
Construction spider box
Here is my NEMA 10-30 extension cord. It allows you to reach out away from your fixed wall plug an additional 6ft. Use on clothes dryers, welders, plasma cutters, air compressor and small electric stoves. The cord is almost 4 feet long, it is a "10ga" cord. This cord is made with a new sealed cord and plug set, the surface mount receptacle is new too..
The cord is only intended for indoor use in dry locations.
If you want to plug your welding machine or electric cooking range into a clothes dryer outlet, because that's all you have and you flip your 30 amp clothes dryer breaker absolutely under no circumstances should you remove the 30 amp clothes dryer breaker and install a higher amp breaker. The circuit breaker is there to protect the wiring inside the walls. If your welding machine is flipping the breaker, that's because its doing its job and you need to turn the machine down.

Please allow 1 weeks for build time. Non stock.
