Model Number: HT-777 LP

Turboforce HT777LP Hyper Turbo Low Pressure 17in Spinner Surface Wand Vacuum Recovery
Under 2500psi Freight Included HT-777 LP

Manufacturer: Turbo Force

Turboforce HT777LP Hyper Turbo Indoor / Outdoor Tile and Grout Medium Pressure
17in Spinner Surface Wand Vacuum Recovery for cleaning pressures 1700 - 2500psi

[HT-777 LP]

The Hyper Turbo's Key features are:

Optional

Turboforce AR50 Cobra Tile & Grout Brick Cleaning Hand Tool TF-C150
67-024 Wand Free Shipping!
Limited to stock!
Video on Link!

Large area tool & can clean 1,000 to 2,000 square feet per hour.

17" Base - rapid cleaning of large areas.

Medium Pressure Model: (HT-777 LP) 1700 - 2500 psi @ 230°; 3+ GPM
recommended.

Patented automatic vacuum compensator - drier floors in a shorter period of time.

Ideally suited to & Large restaurants, auto dealerships, outdoor surface
cleaning, auditorium walkways, school halls and assembly areas and many other
sites.

Includes all the usual Turbo features & stainless steel construction, comfort
grip with non-slip handle, base that is high quality powder coated, easy access in-line
filter, balanced casters for increased tool mobility, in-handle vacuum level control.

Also marketed under part number HT-777-LP

Optional High Pressure Version: HT-777 HP Operates at High Pressure 2000 -
4000 psi @ 250°;

Choosing the right tile and grout spinner wand size:

To professionally pressure wash outside you are required to pick up the water. This also gives you the ability to pressure wash indoors for tile and grout cleaning.

What size pump do you have? How many gallons per hour can your pump push?

Cleaning speed is max psi (pounds per square inch) X (times) max GPM (gallons per minute) = Cleaning units/ speed.

NOTES:

Area under a 12" cleaning tool 113.04 sq inches. Examples Turboforce TH40, Hydroforce SX12, Mytee 8904, Typhoon 12, Westpak 20-0440, (Most common for portables and cleaning systems offering up to 1200 psi at 2 gpm)

Area under a 15" cleaning tool 176.7 sq inches. Examples: Turboforce TH15, Hydroforce SX15 AW105 (Most common for truckmounts, industrial portables (Goliath GO-1500), hybrids truckmounts, synergistic cleaning using 1500 psi at 2.1 gpm)

Area under a 17" cleaning tool 226.97 sq inches. (Most common for truckmounts, medium pressure washers offering 1700 psi @ 3 gpm)

The 17" tool has 28.96% more surface area under the tool over a 15" tool and 100% more area under a 12" tool, but you have to be able to spin the spray bar faster in order to still clean faster.

If I take a 15" cleaning tool like the TH15 or the and supply it with 1500 psi, a nozzle at a 20 degree angle that is 1.5 inches above the ground will move forward at a certain miles per hour forward. That same nozzle at the same angle and distance from the floor will move a larger diameter tool spray bar forward at the same miles per hour. But now because the tool is larger it will take longer to make each revolution. If you do not spin the bar faster you will have to walk slower or the cleaning can 'tiger stripe' the cleaning surface. Compare a 17" tool cleaning at 1700 psi now the spray bar spins faster and you will clean 29% more sq feet per hour over a 15" tool and 100% faster than a 12" diameter tool.

If I take a 1500 psi pump and use it on a 17" tool because the spray bar takes longer to go around the tool, I have to move the tool slower over the floor, thereby offering little to now net benefit in cleaning speed. The key is the larger the tool, the more pressure and gpm you need to make that tool work faster.

Is it safe to cleaning tile and grout at 1700 psi? Yes.

>

Do we have any customers that clean tile and grout at pressure over 1700 psi? No. This is the highest pressure used for inside work. For outside concrete flat work customer use 2000 to 4000 psi between 3.1 to 8 gpm, again depending how fast they want to work.

If you own or use a larger pressure washer or truckmount that can produce 1700 psi @ 3 gpm this is Turboforce HT777LP is a dramatically faster tool!

Disclaimers:

Chart below for entertainment purpose only.

Prices subject to change without notice.

There is not meant to be any particular order.

Not all tools are available for sale and may be discontinued or out of stock.

Factories will post lower minimum psi and gpm to get you to purchase the tool. Using tools at a lower pressure will make the spray bar turn too slow thereby making the tools cleaning speed too slow for most cleaners.

Wheels required for outdoor work (broom finish on concrete wares down the cleaning lip if you do not use wheels) Brush lip tools for indoor work only.

All factories reserve the right to change exact specifications and parts used for the build without notice.

Chart below is for the stand up, full size tools.

Default solution hose when not a metal tube or lance that is installed between the trigger gun and spinner swivel is 3000 psi @ 250 degrees F unless otherwise noted.

Currently the chart only has the spinner style tools that included vacuum air water recovery. Fixed jet, hand held tools, and non vacuum recovery tools are not included in study.

If you find some models that are not included, please email us to have it added.
