

Model Number: 71108102

Clean Storm 71108102, Husqvarna PG280 PG450 PG530 DM340 Power Supply L6-20R Bundle,
No Generator Required

Manufacturer: Clean Storm

Clean Storm 71108102 Husqvarna PG280 PG450 PG530 DM340 Power Supply
L6-20R Bundle No Generator Required

Husqvarna PG 280, PG 450 Power Supply L6-20R; No Generator Required
71108102

Power Cord Adapter Inverter (Reverse Converter) Takes two 115 volt outlets and allows you to use 230 volt appliances that uses under 20 amp @ 230 volts (4600 watts) Single phase current to NEMA (formerly L6-20R) receptacle. Fast and Easy 220 volts.

Commonly used with:

Werkmaster Edge 000-0145-00 Concrete Grinder

Husqvarna PG 280 and PG 450 grinder 967648605

Husqvarna PG 530 grinder 965195814 is now a L6-20 and removed from this grouping

American Sanders Epoch HD 07233A, 07233C

HyperGrinder Lion 430 HD

HyperGrinder HyperLevi 450 TOP

HyperGrinder HyperLevi 500 TOP

HyperGrinder RTK 280, and RTK 280 VS

Magna-Trap 59600 230V Single Phase Electric Floor Grinder

(PG530 has also been sold with L6-30P, L6-20P and L14-30P plugs too. The PG450 has been sold with both the L6-20P and the L6-30P plugs. Please confirm you are ordering the correct power supply.)

*** This item includes a bonus [L6-20P] *** (link to plug)

Other 220 to 240 volt receptacles available including but not limited to: NEMA 6-30R, NEMA 6-50R, NEMA 10-30R, NEMA L14-30R, NEMA L16-30R, NEMA 14-60R, and more...

Perfect for electric cars, pressure washers, welders, plasma cutters, vapor steam cleaners, mobile simulation lab (RN), and other high powered equipment when 230 volt plugs are just not available.

Not for use on GFCI or LDCI 115-125 volt Outlets (because it will trip)

To use simply plug into different outlets and push the momentary button to test voltage. If the voltage test light turns on you are good to go. Not all outlet combinations will produce the correct voltage so you have to test before each use. If you push the voltage test button and the green light does not turn on, simply re-located one of the power cords to a different location and retest. Every job site location has the ability to provide plus or minus 230 volts. If you use 15 amp 115 v to 120 volt circuits then you will only be able to operate 15 amp 230 volt equipment. If your pressure washer needs 23 amps @ 230 volts and you are plugged into 20 amp 115 volt outlets, you will need to turn the pressure down to lower the amp draw. Just turn the pressure regulator / unloader knob counter clockwise. The less pressure, the less horse power is needed to turn the electric motor and this will lower the amp draw. Most 230 volt pressure washers draw less than 20 amps @ 230 volts any way so usually you will not have to turn the pressure down.

Commonly used the the Hypervac Hybrid Air Duct cleaning Machine.

Until both 120 volt power cords are connected to a 120 volt electrical source, it is electrically isolated from the electrical circuit of the exposed male plug on the 2nd power cord. This protects the user from accidental shock through the exposed male plug contact.

Plastic Box is 6" X 6" X 5"

Dual 12-3 X 25 ft power cords with dual 20 amp push breakers.

240 volt Green Test Light with Momentary switch.

Rubber feet on bottom of box

You must test both wall outlets with a receptacle polarity tester before use!

Note: User assumes all responsibility on use. It is the users responsibility to check the inbound voltage, outbound voltage, and total amp draw to verify these are not going to be overloaded. The user agrees to test the amp draw of any appliance or machine that they plug into these converters to ensure they are not being overloaded. Meters are cheap and mistakes are expensive. You can purchase a meter at <https://www.steam-brite.com/voltage-meter-multimeter-p-6259.html>
User agrees to hold Steam Brite, its employees, and agents harmless in the event of any use of said use of converter. The user agrees to not hold SteamBrite and all employee against any problems that arise out of the use of said converters/ inverters. Remember, just because it plugs in does not mean it is OK to use!

Please remember the 80/20 electrical rule. If you are going to plug into a 15 amp outlet and draw long term the device needs to be under 80% of 15 amps = 12 amps max.

If I plug into dual 20 amp breakers long term then the 80/20 rules math is 20 amps X 80% = 16 amps max.

Can be used on the Bulldog 65008 Curing Machine.
